Database Management adds HomeCU Mobile Banking to suite of Mobile Account Management tools

Boise, Idaho - (August 20th, 2010) – Database Management Services, Inc. (DMS) today announced HomeCU Mobile Web, a Home Banking service designed to supplement the HomeCU Mobile Txt Banking. With HomeCU Mobile Web, members can browse the credit union home banking site and view screens designed for PDAs or small mobile web enabled devices. “Whether they wish to get balances with a simple text message or choose to do it via a mobile web device, we have your members covered” said DMS, Vice President Jan Brinkerhoff.

“We all know that members increasingly prefer to do business on their own time schedules. Our Account Alerts, Repeating Transfers, e-Statements and Mobile Banking suite allow members to manage accounts beyond the Credit Union walls or the members home.”

About HomeCU

HomeCU – DMS’ innovative platform of batch, online, and mobile banking solutions – is developed exclusively for use by credit unions. Proven since 1996, over 350 credit unions nationwide use HomeCU’s cost effective services that integrate securely with data processing systems, check image vendors, bill pay providers, and other 3rd party systems. Additional information and a live demo are available at www.homecu.com.
